## Introducing...R-Seal®

The Only Rigid Insulation System  
Designed Specifically for Metal Buildings

**R-Seal®** is a durable rigid board product designed for use in roofs and walls of new construction and retrofit applications. It is the only rigid insulation system specifically engineered for metal buildings and the field concerns of metal building erectors.

For more information about **R-Seal®**, contact your local Therm-All representative, visit [therm-all.com](http://therm-all.com) or call **888-2-INSUL-8**.

## R-Seal® is:

- A solution for meeting commercial energy codes, including the ASHRAE 90.1 and IECC continuous air barrier requirements.
- The most durable rigid board product to hit the metal building market. **R-Seal®** has a higher compressive strength and a more durable finish than other polyiso sheets.
- Installed faster than any board product, and with the smallest crew imaginable. Because **R-Seal®** is so durable, it only takes one crew member to install a product sheet while another preps the building wall panel.
- The highest R-value per inch in the industry.
- More economical than insulated metal panels. No boom trucks or heavy equipment are needed, so you save money on machine rentals and labor.
- Plus, equipped with integral tape tabs, available in custom lengths, and delivered with individual job detailing.
